

Display Master: Key Ideas: 1s, 2s, 5s, 10s, and 11s

- The numbers in a skip-count sequence are called multiples. For example, when skip-counting by 10s, the skip-count sequence 10, 20, 30... represents the multiples of 10.
- The products in a multiplication table are the multiples of the column/row number.
